# Industry Context & Market Need

The economic and structural realities of the Indian construction sector

### 🔨 Unorganized Workforce

Over 85% of daily-wage tradespersons (plumbers, masons, electricians) operate through informal physical labor stands (nakas), resulting in erratic wages and severe underemployment.

### 💸 Middlemen Exploitation

Unlicensed intermediaries capture 15%–30% in arbitrary brokerage commissions from workers while providing zero accountability, safety assurances, or price transparency to clients.

### 📋 Lack of Digitization

Over 90% of small and mid-sized construction contracts rely on verbal agreements and paper registers, leading to chronic payment withholding, attendance fraud, and legal disputes.

### 🎯 The BuildConnect Transformation

BuildConnect provides a verified, transparent, and direct digital marketplace that combines radius-based emergency job matching, structured multi-bid tenders, and tamper-proof GPS QR attendance.

# Problem Statement

Four critical structural challenges addressed by the platform

### 1. Discovery & Verification Bottleneck

Property owners have no reliable way to verify the professional identity, police credentials, or past customer ratings of workers entering their residential homes.

### 2. Contract & Payment Friction

Verbal arrangements lead to scope creep and unpaid balances. Contractors lack formal milestone schedules, and clients have no stage-gate approval mechanism before funds are disbursed.

### 3. Ghost Worker Attendance Fraud

Contractors on large construction sites suffer from inflated paper muster rolls and proxy check-ins, inflating payroll expenditures by up to 18%.

### 4. Information Asymmetry in Bidding

Commercial renovation tenders are settled via opaque telephone negotiations without standard line-item deliverables, leading to cost overruns and delays.

# Project Objectives

Measurable engineering goals accomplished in this implementation

### Role Isolation

Build a robust 4-tier access control system (Admin, Client, Worker, Contractor) with complete session containment and zero cross-tenant data leakage.

### Dual Booking

Develop Mode A (Instant Booking with atomic concurrency locks) for emergency repairs and Mode B (Compare Quotes) for multi-bid project tenders.

### Dynamic QR Check-in

Implement dynamic 60-second time-expiring QR tokens with browser GPS geolocation capture to eliminate manual muster roll fraud.

### OWASP Hardening

Enforce parameterized PDO prepared statements, context-aware output escaping, CSRF tokens, and immutable audit logs across all 29 tables.

# Proposed Solution

End-to-end digital lifecycle of the BuildConnect platform

### 1. KYC Onboarding

Workers and contractors upload Aadhaar/PAN documents. Profiles remain inactive until verified by System Admin in the KYC review queue.

### 2. Dual Matching

Clients choose between Instant Radius-based Dispatch (under ₹15,000) or Formal Project Tenders with itemized contractor bidding.

### 3. Digital Contracts

Mutual sign-off creates structured milestone deliverables with payment schedules, deliverables tracking, and change-order control.

### 4. On-Site Tracking

Dynamic QR attendance logs GPS timestamps. Milestone reviews unlock stage payments, backed by verified peer reviews.

# Technology Stack

Lightweight, highly performant, and dependency-minimal architecture

## ⚙️ Backend Engine

- **PHP 8.2** (Strict typing, procedural + OOP utilities)
- **PDO Driver** (Persistent parameterized statements)
- **Session Engine** (Bcrypt cost 10, session regeneration)
- **QR Generation** (Native PHP QR Code library)

## 🗄️ Database Tier

- **MySQL 8.0 / MariaDB 10.4**
- **InnoDB Engine** (ACID transactions, foreign keys)
- **29 Normalized Tables** in 3NF
- **Collation:** `utf8mb4_unicode_ci`

## 🎨 Frontend & UI

- **HTML5 & Semantic Markup**
- **Vanilla CSS** with custom design tokens
- **Bootstrap 5.3** grid and responsive modals
- **Chart.js 4.4** & **Leaflet.js 1.9**

# System Architecture

3-Tier Monolithic MVC-Inspired Architecture with Central Security Gatekeeper

### 1. Presentation Tier

Four isolated role dashboards:

- `/admin/` (Moderation & Analytics)
- `/client/` (Tenders & Bookings)
- `/worker/` (Dispatch & Earnings)
- `/contractor/` (Bidding & Crew)

### 2. Application Tier

Core PHP Business Controllers:

- **Gatekeeper:** `config/auth.php` (RBAC)
- **Dual Booking Engine** (Locking & Bidding)
- **REST API:** `/api/attendance.php`
- **Audit Journal:** Automated event logging

### 3. Database Tier

MySQL 8.0 InnoDB Database:

- 29 Relational Tables
- Strict Foreign Key Constraints
- Indexed on frequent join columns
- Transactions for payment & contracts

# User Roles & Access Control

Four distinct operational personas with strict boundary isolation

## 👑 Admin

**Scope: System Governance**

- KYC Document Approval
- User Account Moderation
- Financial Audit Journal
- System Performance Reports

## 👤 Client

**Scope: Hiring & Payments**

- Instant Worker Dispatch
- Project Tender Creation
- Quotation Evaluation
- Contract Sign-Off & Ratings

## 🔨 Worker

**Scope: Field Execution**

- Trade Skills & Hourly Rates
- Availability Toggle
- Instant Request Claiming
- QR Attendance Check-in

## 🏢 Contractor

**Scope: Enterprise Delivery**

- Tender Board Bidding
- Milestone Contract Drafts
- Crew Allocation
- Dynamic QR Code Generation

# Main Modules & Core Workflows

Key functional modules implemented across 134 production PHP files

## Dual Booking Engine

- **Mode A (Instant):** Haversine radius search matches available tradespersons within 50 km. Atomic `SELECT ... FOR UPDATE` locks prevent double-booking.
- **Mode B (Quotes):** Structured tenders with itemized scope, deliverables, and milestone payment schedules.

## Dynamic QR Attendance

- Contractors generate dynamic QR codes refreshing every 60 seconds.
- Worker scans via HTML5 camera; API validates token expiry and records browser latitude, longitude, and timestamp.

## Digital Contract Lifecycle

- Formal contracts generated upon bid acceptance with mutual digital signing.
- Milestone stage-gate progression (`Pending` → `In Progress` → `Approved`).

## Admin Governance & Audit

- Document review drawer with side-by-side Aadhaar preview and one-click verification.
- Immutable audit logging tracking user ID, IP address, user agent, and timestamp.

# Database Design & Schema

29 Relational Tables in 3NF with Strict Foreign Key Referential Integrity

| Table Entity | Key Columns | Relationships & Constraints | Purpose |
|---|---|---|---|
| users | id, email, password, role, is_verified | Primary Auth Parent (1:1 with Profiles) | Central authentication, role assignment, KYC state |
| bookings | id, client_id, worker_id, status, budget | FK to users(id), services(id) | Mode A Instant Emergency Booking tracking |
| projects & bids | id, client_id, contractor_id, amount | FK to users(id), categories(id) | Mode B Large Project Tenders & competitive bidding |
| contracts & milestones | id, project_id, status, amount | FK to projects(id), users(id) | Formal agreement, deliverables, stage payments |
| attendance | id, worker_id, contractor_id, qr_token | FK to users(id) | Dynamic QR scan records with GPS coordinates |
| audit_logs | id, user_id, action, ip_address, created_at | FK to users(id) | Immutable security and compliance event journal |

* All 29 tables utilize the InnoDB storage engine with parameterized indexing on high-frequency query predicates.

# Application Showcase

Clean, responsive, high-contrast dashboards across all four user portals

### 👑 Admin Command Dashboard

- Real-time KPI metrics cards: Total Users, Pending KYC, Active Projects, Platform Gross Volume.
- User Moderation Table with direct activation/deactivation toggles.
- Verification Queue with side-by-side document modal inspector.

### 👤 Client Project Hub

- Interactive Project Tender creation wizard with budget range and timeline.
- Side-by-side contractor bid comparison matrix with itemized costs.
- Instant booking dispatch view with live worker availability status.

### 🔨 Worker Dispatch Portal

- Instant job notification card with trade category and client location.
- One-click accept/decline action backed by atomic database row locks.
- Integrated QR attendance scanner via device camera.

### 🏢 Contractor Operations Hub

- Dynamic QR attendance generator with auto-refresh timer.
- Milestone contract management with stage-gate progress controls.
- Itemized bid submission form with structured deliverables.

# Testing, Verification & Results

Comprehensive automated regression suites executing against the live server

| 209 | 209 | 0 | 100% |
|---|---|---|---|
| TOTAL TEST ASSERTIONS | PASSED TESTS | FAILURES / ERRORS | PASS RATE |

| Test Suite Module | Scope & Methodology | Assertions | Status |
|---|---|---|---|
| PHP Syntax Linting | CLI syntax validation (php -l) across all application files | 134 files | 100% PASS |
| Live HTTP RBAC Suite | CURL session requests testing cross-role boundary security (403 verification) | 24 tests | 100% PASS |
| Dual Booking E2E Suite | Full lifecycle verification of Mode A (Instant) and Mode B (Quotes) | 14 tests | 100% PASS |
| Admin Master Suite | KYC document approvals, user status toggling, and audit log generation | 14 tests | 100% PASS |
| Authentication Suite | Demo account logins, Bcrypt verification, session persistence | 9 tests | 100% PASS |

# Project Limitations

Transparent technical boundaries of the current implementation

### 1. External Payment Webhook Escrow

Financial records are accurately logged in the `payments` table with transaction references, but automated bank escrow releases (e.g., Razorpay/Stripe webhooks) require commercial merchant KYC credentials.

### 2. Browser Camera vs Native Hardware

The on-site QR scanner uses the HTML5 `navigator.mediaDevices.getUserMedia` API, which depends on browser security policies and HTTPS rather than low-level native mobile camera autofocus.

### 3. Short-Polling vs WebSockets

System notifications and live status updates currently operate via HTTP short-polling and page navigation events rather than persistent full-duplex WebSocket connections.

### 4. Offline Tile Caching

Map rendering relies on active internet access for Leaflet and OpenStreetMap tiles; offline map caching for remote, connectivity-deprived construction sites is not yet implemented.

# Future Scope & Enhancements

Roadmap for commercialization and enterprise scaling

### 📱 Native Apps

Develop Flutter companion mobile apps with background GPS geofencing and offline muster roll synchronization for remote construction sites.

### 💳 Escrow Integration

Integrate Razorpay Route/Escrow APIs for automated milestone funds locking and instant payout release upon mutual digital sign-off.

### 🤖 AI Quotations

Train machine learning models on historical project tenders to suggest benchmark quotation estimates based on regional material costs.

### 📡 IoT Hardware

Interface on-site biometric fingerprint scanners and RFID turnstiles directly with the BuildConnect attendance REST API for commercial projects.

# Conclusion & Defense Q&A

Summary of academic and technical achievements

BuildConnect successfully transforms an informal, dispute-ridden, and unorganized sector into an accountable, transparent, and milestone-driven digital marketplace.

### ✅ Architecture

29 normalized tables in 3NF, 134 production PHP files, 4 isolated role domains.

### ✅ Innovation

Dual Booking Engine (Mode A & B) + Dynamic QR Attendance with GPS capture.

### ✅ Reliability

209/209 test assertions passed with zero errors, OWASP security hardened.

## Thank You!

I welcome your questions and look forward to demonstrating the live application.
